KEY INSIGHTS & TAKEAWAYS

PROJECT HYPOTHESIS STATEMENT

The use of publicly or privately available data can help reduce financial and reputational risks for highway asset management companies through improved contract pricing in projects which are impacted by external factors.

THE THREE TYPES OF ROAD ASSET MAINTENANCE

**EMERGENCY
MAINTENANCE**

**REACTIVE
MAINTENANCE**

**PREDICTIVE
MAINTENANCE**

OUTSOURCING HIGHWAY MAINTENANCE

**OUTSOURCING HIGHWAY MAINTENANCE
RESPONSIBILITIES HAS PROVEN TO BE
COST-EFFECTIVE FOR MANY STATES.**

TYPES OF OUTSOURCING CONTRACTS

INDIVIDUAL STAFF HOUR

Contract for specialized activities that are paid for on an hourly basis

UNIT/CYCLE

Specific, identified maintenance activities on a prescriptive basis

STAFF AUGMENTATION

In-house forces at state use crews provided by contractors paid at fixed rates

PERFORMANCE-BASED

Continuous routine and preventative maintenance activities based on defined performance targets

WHAT ARE PERFORMANCE-BASED CONTRACTS?

Longer-term contracts

Can result in large cost savings due to larger, more efficient grouping of work

Assures the highway management company has a stake in the game and will act more like an owner

Transfers risk from government agency to contractor

**IF PERFORMANCE STANDARDS ARE NOT MET,
CONTRACTORS FACE FINANCIAL PENALTIES.**

TRANSFERRING RISK

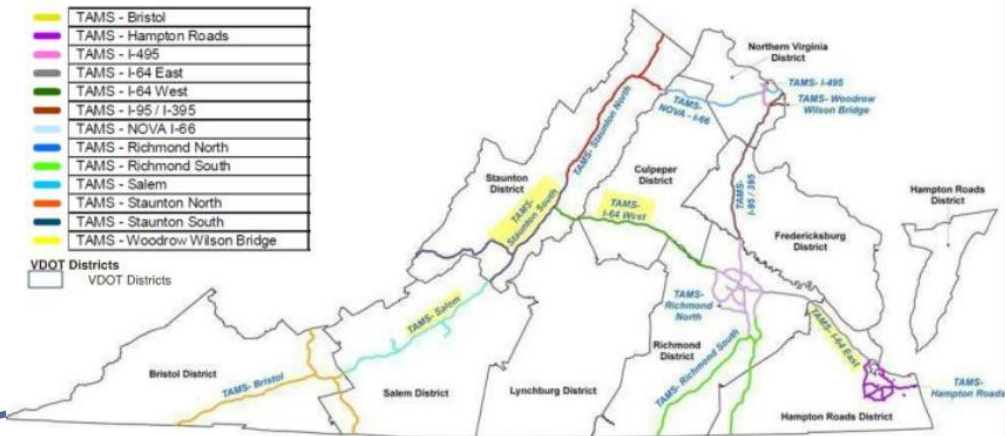

VDOT: MAJOR USER OF PERFORMANCE-BASED CONTRACTS FOR OPERATIONS AND MAINTENANCE

**ROAD ASSET MANAGEMENT FIRMS
RELY HEAVILY ON INDIVIDUAL EXPERTISE**

ROAD ASSET INVENTORY IS CHALLENGING

WOODROW WILSON BRIDGE

Inventory Item: Light Post

**Location: I-395 Northbound Lane
(Mile Marker 11)**

Grade: F

Remaining Life: 0 months

Inventory Item: Guardrail

Location: I-95 Southbound Lane (Mile Marker 56)

Grade: F

Remaining Life: 0 months

Inventory Item: Pavement Striping

**Location: I-395 Northbound Lane
(Mile Marker 65)**

Grade: D

Remaining Life: 9 months

Inventory Item: Sound Barrier

**Location: I-495 Westbound Lane
(Mile Marker 25)**

Grade: B-

Remaining Life: 6 months

INCIDENT MANAGEMENT

Firms are also tasked with responding to and clearing incidents 24/7 within project limits.

Many incidents go unreported and are the responsibility of the contractor.

Example: Staunton TAMS

2,779 Incidents over 9 yrs

Range of Cost: \$156 to \$153,434

Avg Damage Cost: \$5,626

Source: Virginia Dept of Transportation

ROUTINE CONTRACT COMPLIANCE AUDITS

DOTs perform periodic audits to ensure contract terms are met.

Auditors measure timeliness and rate maintenance effectiveness.

Poor performance can result in liquidated damages and penalties of 20% or more.

TAMS Contract Performance

“Contractor performance will be assessed and measured by two (2) separate means:

- Daily Timeliness Requirements – evaluates whether or not Timeliness Requirements are achieved.*
- Maintenance Rating Program (MRP) Evaluation – evaluates whether or not specified asset items meet the contractually required minimum service or maintenance condition within a highway Site.” (IFB 151940-KC)*

- Each asset in the contract has specific Timeliness Requirements**

- Failure to meet the Timeliness Requirement results in \$200-\$400/day deduction. This is capped at 3% of monthly payment. (Average TAMS contract fixed monthly is approximately \$185,000.)

- Each asset in the contract has specific MRP Requirements**

- MRP evaluation is performed twice annually
- Route is broken into 1/10th mile segments and 5% of sites are randomly selected for review. Within each sample, all of the assets are evaluated.
- Each asset in the sample is evaluated against its MRP Requirement.
- Similar assets are scored together. Asset Groups must have a score of 80% or 90%. Lower score result in deductions.

- Total Timeliness and MRP deductions are capped at 20% of annual contract value**

CATEGORIZING AND ASSESSING ASSETS USING MACHINE LEARNING

COMPLIANCE REPORTING

| Quarterly Compliance Report 4/1/2021 1:32PM EST | | |
|---|-----------|--|
| Asset | Status | Notes |
| Grass & Vegetation | Compliant | No Litter, no invasive species detected |
| Brush & Trees | Compliant | Sight distance clear up to 500'. No dead trees leaning towards roadway |
| Debris & Road Kill | Compliant | No obstructions found on roadways or shoulders |

COMPLIANCE REQUIREMENTS

Administrative Services/ Procurement
RFP # 155187-FH
Title: WWB BIMs

ATTACHMENT J-A Performance Criteria Part A

| ASSET | OUTCOME | TOLERANCE AND CRITERIA |
|-----------------------------|---|---|
| ROADSIDE ASSET GROUP | | |
| Grass and Vegetation | Healthy Growing Neat appearance Acceptable coverage Proper sight distance | Requirement: <ul style="list-style-type: none"> Litter pickup shall occur in advance of each mowing cycle Prevent the growth of unwanted weeds, grass, brush and trees. MRP Requirements: <ul style="list-style-type: none"> <10% of mowable area to exceed (10") in height (unless otherwise noted). All sight distances are clear. Neat /trimmed around guardrail, headwalls, retaining walls, wall railings, paved ditches, signs and other fixed objects. <10% bare ground per 10th mile section. No cut less than 2" in height. No invasive species in mowable areas (Canadian Thistle, Kudzu Vine, Johnson Grass, Japanese Knotweed). Timeliness Requirement: Vegetation affecting sight distance presenting a safety hazard shall be removed within 24 hours of notification or discovery. |
| | Brush & Trees | Requirements: <ul style="list-style-type: none"> Notification of removal/trimming of trees still standing shall be made to adjacent properties – when requested in writing by the adjacent City/Government Agencies or property owners. MRP Requirements: <ul style="list-style-type: none"> No trees or brush affecting sight distance. Vertical clearance of 30' over roadway (includes shoulders). Vertical clearance of 7' over sidewalks and trails. No leaning or dead trees that present a hazard. <i>Note: A "hazardous tree" is a tree with structural defects likely to cause failure of all or part of the tree, which could strike a roadway, paved shoulder, bridge, or overhead sign structure, or any situation or condition that causes, or has the ability to cause, an unsafe condition to the traveling public or presents the possibility to cause damage to a public and/or private property.</i> |

| ASSET | OUTCOME | TOLERANCE AND CRITERIA |
|-------|---------|--|
| | | <ul style="list-style-type: none"> No brush or trees that affect the inspection or repair of bridges or other structures. |

DATA-DRIVEN MANAGEMENT LOWERS OPERATIONS AND MAINTENANCE COSTS

Facial images, car number plates, and other data that would allow an individual to be identified need to be obscured.

DATA COMPLIANCE

- **Build or augment a data provider's data sets**
- **Enact clear data disclosure policies**
- **Implement and maintain administrative, physical and technical safeguards**

COMMERCIAL MODEL

Data repository aggregating multiple data sources for rapid access. Includes satellite, CCTV and road sensors.

B2B subscription-based model. License fee per user. Environment allows users to annotate and document observations.

PLATFORM AS A SERVICE

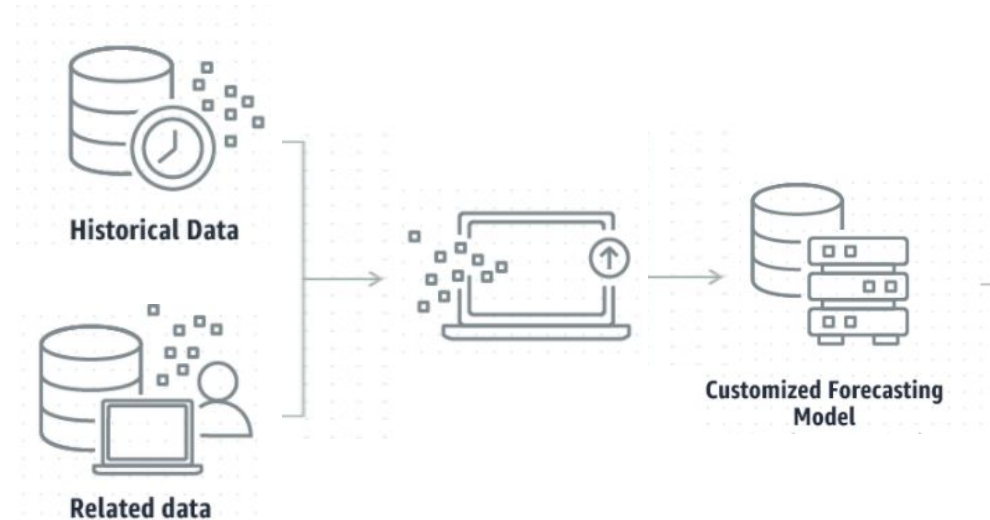

COMMERCIAL MODEL

Use Machine learning to combine data sources and deliver highly accurate forecasts.

Information captured by users will improve the accuracy over time.

Pay for what you use: No minimum fees or upfront commitments.

FORECASTING AS A SERVICE

COMMERCIAL MODEL

Analysts develop custom reports for:

- Data preparation and workflow auditing
- Simulation and scenario analysis
- Economic impact analysis
- Industry Trends

CONSULTING SERVICES

PRODUCT DEVELOPMENT ROADMAP

PHASE 1

PHASE 2

PHASE 3

PHASE 4

- Navigate and document assets leveraging VR and AR
 - Annotate on-the-fly records captured in database
 - Forecasts future events based on historical data
- Object Recognition
 - Anomaly detection
 - Crowdsource ML training data
 - Custom model to address project specifics
- Compliance reports. Automate work order generation and closure
 - Quality and accuracy control for bids leveraging bid predict functionality
- ML deployed on edge devices. Inferring on the edge
 - ML deployed on live footage. Reduce the administrative burden

PRE- COMMERCIAL

Work backwards from asset manager challenge

Reduce administrative burden and de-risk project leveraging data

Leverage success with reference customer in promoting solution

LOI from asset management contingent on success with MVP

PRODUCT DEVELOPMENT

COMMERCIAL PRODUCT

Publish website - Main channel to deploy services

Co-author technical paper with reference customer

Publish case study with reference customer

Exhibit at infrastructure maintenance trade shows

GO TO MARKET STRATEGY

INTELLIGENT INFRASTRUCTURE MANAGEMENT

INTELLIGENT INFRASTRUCTURE MANAGEMENT

WHAT WE LEARNED

Wealth of applicable public and private data is available today

We built a viable product using virtual and augmented reality and forecasting models

Industry players have expressed interest in partnering with us to develop our solution

Five Forces

Average ★: 2.75

Bargaining Power of Suppliers

Since supplier offerings are already developed and we are repurposing them, we have a corporative partnership. As of today there isn't a market seeking this solution. However, as the market develops, if the sector is prioritized this can create a challenge for us to access the required data, as our suppliers may elect to pursue this industry with their solutions. We are benefiting from first mover advantage with a unique composition of management team, which is translating to bargaining power.

Threat of New Entrants

Three types of entrants. Technology companies, Asset Managers and large A&E firms. Limited Capital required to develop platform for technology companies however they lack the industry knowledge. Asset manager have industry knowledge but technology hurdles. A&E firms opportunity cost of tackling this industry challenge is high. Too high to overcome at this point in time.

Threat of Substitutes

Nearly all transactions follow conventional commercial models of a direct manual sourcing of data by physically surveying the infrastructure.

Bargaining Power of Customers

We will work with Asset Managers, Consultants, infrastructure developers and financiers. We will not be exposed to the bargaining power of the customers. This technology unlock value for the personas listed above. The cost benefit of accessing this data is favorable. There is limited competition in the space.

SWOT Analysis

| INTERNAL FACTORS | |
|--|---|
| STRENGTHS (+) | WEAKNESSES (-) |
| <ul style="list-style-type: none">▪ Existing relationships with key suppliers▪ Access to internal technical resources▪ A solution with a clear value proposition that unlocks value in short term▪ A simple commercial model that does not require a major investment▪ Interest from perspective clients | <ul style="list-style-type: none">▪ As we are first to market for this specific use case, we have limited information in the way of addressable market as well as adoption rates▪ The first phase of our solution does not allow for IP protections▪ Commercial model does not allow for high frequency of validation▪ Limited access to capital. Team members are leveraging their network and time to validate the business model. |

| EXTERNAL FACTORS | |
|--|--|
| OPPORTUNITIES (+) | THREATS (-) |
| <ul style="list-style-type: none">▪ Sensors and edge devices are becoming cheaper and more readily available.▪ More projects that will include operations and maintenance that will need to leverage data.▪ A recognition that data has an important role to play, and an industry that is willing to explore solutions that unlock the value of existing data.▪ A central platform to store and access data does not exist. An opportunity exists to build a go-to data repository for the transportation space. | <ul style="list-style-type: none">▪ As market matures some of our suppliers may opt to provide their own solution▪ As the solution is proven, asset managers may decide to develop this competency in-house▪ As this is a new solution to market, we may face challenges related to the accuracy of the solution |

We Make No Representations and Warranties use in Appendix

- Fitness for a particular purpose,
- Noninfringement,
- Interruption of service,
- 3 • Accuracy, or that the data is error free
- Arising from the information supplied by any third party data supplier

This data is furnished by third parties which may be obtained by them directly or through another third party(ies). We have no control over the accuracy, quality or timeliness of the data.

Key Personas We Need (Melba recommends use in Appendix)

Data Engineering

- Building the platform for which all data is collected, organized, and analyzed
- Ingesting all data into this platform
- Cleanse data ingested into data platform
- Prep data for analysis based on guidance from data modelers and data analysts/scientists
- Maintain and support these environments to ensure reliability and performance

Data Analytics

- Work with Data Engineering to ensure data is properly structured and complete for analysis
- Develop and support internal and external customers decision makers by providing easy to use data tools and guidance on how to use them
- Coordinate with Data Science team deeper studies that should be performed and any preliminary findings
- Develop and provide analytics platform for internal and external customers users to find and interact with data

Data Science

- Work with Data Engineering and Data Analytics teams to ensure sufficient data is being collected and is organized in a proper way for use
- Support strategic decision that will have a great impact to the internal business or customers
- Work with Data Analytics to uncover deeper questions to explore using statistical and machine learning methods
- Build intelligence systems that can enhance the business' processes and products
- Provide guidance and mentorship to internal and external customers on proper interpretation of data and how to test hypothesis

Available Market (Melba recommends use in Appendix)
